

# MITSUBISHI A6M ZERO FIGHTER

AGORA MODELS

Your 1:18 model of the Japanese Zero is reproduced in the most exquisite detail, with electronics allowing you to recreate aeronautical operations such as take-off and landing, turning, firing and night combat. Lights, machine-gun and propeller sounds bring your legendary fighter plane to life.

The three-blade constant-speed propeller rotates at high speed.

Rudder can be moved left and right, and elevators move up and down.

Retractable landing gear

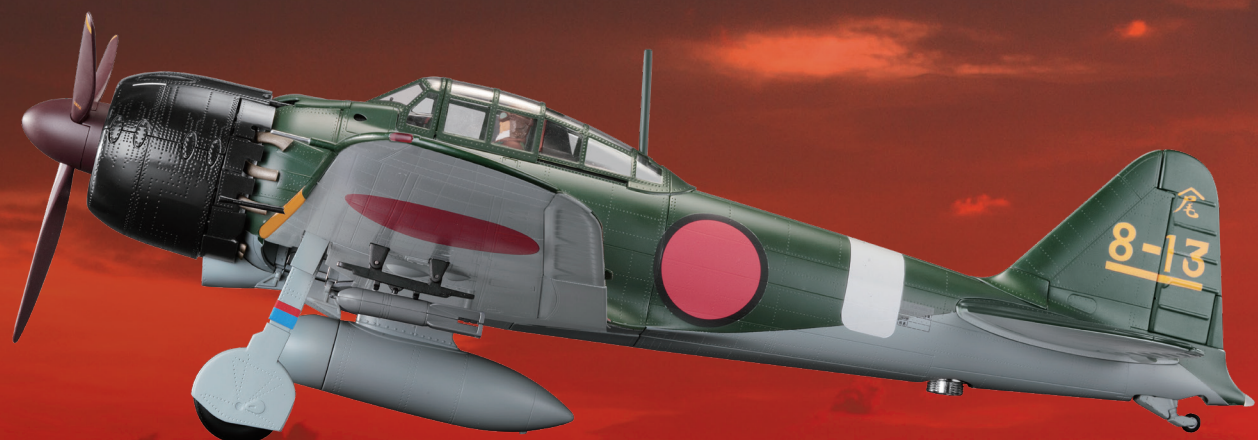

The Nakajima Sakae radial air-cooled engine is replicated in intricate detail.

Your Zero Fighter model includes a display stand full of working electronics for you to assemble and wire up.

1:18 SCALE

MADE WITH PREMIUM METAL PARTS

50.7 cm (20")

19.5 cm (7 1/2")

61.1 cm (24")

## AGORA ADVANTAGE

The Agora Advantage Club To extend our promise of unrivalled customer care, and to bring extra benefits for you to enjoy, we're offering membership to the exclusive Agora Advantage Club.

### AGORAPRO

Anyone who starts an Agora model automatically becomes an Agorapro member Agorapro member status on website forums Agorapro notification about new launches Advanced notification about new launches Priority access to Limited-Edition models

### AGORAELITE

Once you have completed your first model, you will become an AgoraElite member All the Agorapro benefits plus: Agorapro member status on website forums Voucher to choose a FREE FIRST PACK of any model from the Agora product range each time you complete a model Free personalised license plate for all future Agora Models cars Discount on accessories AgorElite members card with name, account number, plus VIP customer service for AgorElite members only.

## Making your A6M Zero Fighter

**3D Scanning**  
 Replicated in detail using photographs and descriptions from the time, and reproduced using the latest 3D modelling techniques.

**Moulding**  
 The 3D images capture every single component of the Zero, and are then used to create a series of over 100 individual moulds from which the model parts are formed. The moulds are made from solid steel, some of which weigh over 1 tonne, and can measure over 1m<sup>3</sup> (35ft<sup>3</sup>). Each mould is inspected by hand to ensure the resulting parts maintain the original detailing of the initial laser scan. An alloy metal known as 'zamak' is used for casting to give the desired combination of light weight, durability, and fine detailing.

**Painting**  
 Once the parts have been formed they are sprayed in the precise colours of the original aircraft 8-13.

**Production**  
 Our scanning and design process will usually take up to six months. After a further four months of engineering for each mould, the final parts are ready to be produced in our state-of-the-art factory. All stages of the design and production are carefully vetted and approved by our expert team here at Agora Models.
